Helping you implement no cost/low cost operational improvements.

Run it Right is a FREE** service from Enbridge Gas designed to help you achieve operational improvements through no cost/low cost energy efficiency solutions. Developed for our large commercial customers, this exclusive service includes technical expertise and support, as well as financial incentives.

Optional training for in-house operators or contractors.
If you use an in-house mechanical operator, your operator can attend Enbridge’s one-day training session on operational improvements at no cost. Topics include:

- Defining recommissioning and identifying no cost/low cost measures
- Discussing specific recommissioning best practices
- Identifying short, medium and long term payback opportunities

Enbridge Program Conditions:
- To be eligible, you must be an Enbridge customer that consumes at least 300,000 m³ of natural gas annually. Program registration is required.
- Approved measures must be implemented between January 3, 2012 and December 31, 2012.
- Program is subject to cancellation without notice at any time.
- Enbridge makes no representation, warranty or guarantee regarding the projected savings of any energy efficiency measure.
- Additional program terms, conditions and restrictions apply. Ask your ESC for details.

To register for Run It Right or for more information, contact your Enbridge Energy Solutions Consultant.

Run it Right

Reduce energy consumption. Boost your bottom line.

This operational improvement service is ideal for our large volume natural gas customers*. By participating in Run it Right, you’ll get access to Enbridge Energy Solutions Consultants (ESCs) who will develop a customized energy efficiency strategy to help you reduce and monitor energy consumption in your buildings.

With this exclusive service, your ESC will:

- Make no cost/low cost site specific recommendations
- Advise you of available financial incentives
- Upgrade you to a pulse capable meter which provides daily gas consumption data (participating customers)
- Support you throughout the entire process

Run it Right

Implement Energy-Saving Measures

- Enbridge will provide a checklist for site specific operational improvement measures.
- If you are using your own in-house energy manager, or mechanical contractor to implement improvements, training on operational improvements can be provided.
- To qualify for the incentives, you’ll need to submit to Enbridge the completed checklist, as well as invoices for any work done, within one month of signing the application.

Gas Consumption Data Analysis

- A 1-year minimum baseline is required for an effective operational improvement assessment. Methodology of creating the baseline must be approved by Enbridge.
- You can use Enbridge resources to create the baseline. Or, if you want to create your own baseline or use a third-party, you can work with Enbridge to access consumption data.
- Qualified customers may be eligible to upgrade to a pulse capable meter to assist with data gathering.

Monitoring & Reporting

- Ongoing monitoring of gas saving is a requirement of this program.
- If you choose to do the monitoring, Enbridge will provide you with an incentive to create bi-monthly reports documenting savings (total of 6). If the savings are not sustained, Enbridge will work with you to bring the savings back on track.
- If you choose Enbridge to monitor your gas savings, Enbridge will provide you with bi-monthly reports to ensure savings are being sustained.

> Implementation Incentives:

Enbridge will subsidize 100% of the cost of implementing operational improvements, up to a maximum of $5,000. Incentive will be paid upon receiving proof of implementation (eg; invoice) and the list of completed measures. These operational improvements must be completed within one month of signing the application form.

> Monitoring/reporting incentives:

If you’re determining the baseline and monitoring the gas savings, Enbridge will provide $500 per report for 6 reports (total of $3,000). These reports must be submitted to Enbridge every two months for 12 months. If Enbridge is determining the baseline and monitoring the gas savings, we will provide you with a progress report every two months.
