

Ecolab Bed Bug Service

After years of virtual eradication from the hospitality industry, the bed bug is back and showing up in even the most exclusive hotels and resorts. While bed bugs aren't dangerous (they have not been shown to transmit disease), these small, nocturnal blood-feeding insects can seriously harm your business by upsetting guests, generating bad publicity or, worse, raising legal concerns.

Proven effective in over 300,000 hotel rooms, Ecolab's intensive service kills bed bugs in all life stages and removes them from harborage sites throughout the infested hotel room, helping to minimize any impact on guest satisfaction.

Ecolab has the only in-house R&D team that actively studies bed bug activity and life cycles.

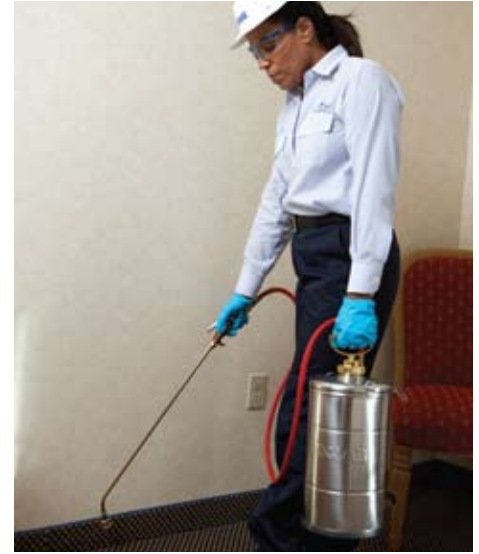

Scientifically proven treatment strategy helps eliminate bed bug infestations.*

Thorough inspection of infected rooms locates bed bug harborage sites.

Treatment of infested – and potentially infested – areas helps ensure immediate eradication.

Follow-up inspections and treatments help ensure elimination is complete.

Our “Teaming up Against Bed Bugs” training materials reduce the risk of infestations by teaching staff proper inspection procedures and protocols.

EDUCATIONAL OPTIONS

- ▲ Bilingual English/Spanish video and printed materials inform staff of best inspection practices and what to do if bed bugs are discovered.
- ▲ Wall poster reminds staff to inspect rooms daily.
- ▲ Laundry recommendations guide describes the proper procedure for handling linens that have come in contact with bed bugs.

THE ECOLAB DIFFERENCE

	Ecolab Pest Elimination	What does your current pest control provider deliver?
Scientifically proven, thorough, effective protocol	X	
Data capture of specific rooms treated, demonstrating proof of due diligence	X	
Dedicated Research and Development bed bug experts	X	
Industry-leading expertise, servicing more rooms than any other pest control provider	X	

* Service approach may vary based on the needs and conditions of your facility and local regulations.
