## Spot the Energy Savings Opportunities workshop

Identify opportunities that can help your company save on energy use and reduce its energy costs. The *Spot the Energy Savings Opportunities* workshop will help you understand energy basics and how to identify the up-front savings opportunities.

The best place to begin to look for energy savings opportunities is where the energy is the most expensive - at the point of end use.

For example, did you know that the difference in cost between an energy-efficient motor and a regular motor may be paid for by the incremental change in efficiency? At the *Spot the Energy Savings Opportunities* workshop, solutions such as this are identified in a checklist of opportunities.

Want to know how to save on fans and pumps, boiler systems and even building envelope systems, and how you can assess the benefits of energy efficiency?

Then the *Spot the Energy Savings Opportunities* workshop is for you!

**You will learn to:** recognize opportunities involving electrical and heating fixtures and facilities, from point of sale to end use more specifically:

- reviewing energy basics;
- identifying immediate opportunities;
- evaluating advantages of energy efficiency.

By being more aware of environmentally-friendly energy, you will help your company gain a competitive advantage while reducing greenhouse gas emissions which impact climate change.

## Who should attend this workshop?

- Facility managers
- Building managers
- Maintenance supervisors
- Operations supervisors
- Electrical system supervisors
- And anyone else who is responsible for facilities and who knows how equipment works and how to evaluate it.
